

## **International Journal of Primatology Reviewer guidelines**

### **Basic philosophy**

The purpose of peer review is to improve the quality of the manuscript under review, and of the material that is eventually published. Conscientious peer review is a time-consuming task but is essential to assure the quality of scientific journals. The *International Journal of Primatology* and the *International Primatological Society* are very grateful for the time and effort you invest in the review process.

The *International Journal of Primatology* adheres to the Committee on Publication Ethics (COPE) Code of Conduct and Best Practice Guidelines (<http://publicationethics.org>). We strive to ensure that peer review is fair, unbiased and timely. Decisions to accept or reject a manuscript for publication are based on the manuscript's importance, originality and clarity, and the study's validity and its relevance to the remit of the journal.

We use a wide range of sources to identify potential reviewers, including the editorial board, personal knowledge, author suggestions, and bibliographic databases. Reviewers' evaluations play a major role in our decision as to whether to accept a manuscript for publication.

The *International Journal of Primatology* operates a review process in which the identities of the authors are known to the reviewers, but reviewers are not known to the authors, unless they choose to sign their review (i.e. single-blind review). Unless you indicate otherwise (e.g., by signing your comments to the authors), we will assume you wish to remain anonymous.

### **General notes**

Reviews should be conducted fairly and objectively. Personal criticism of the author is inappropriate. If the research reported in the manuscript is flawed, criticize the science, not the scientist. Personal criticism is likely to lead an author to ignore useful comments, making your review less useful to your field. Criticisms should be objective, not merely differences of opinion, and intended to help the author improve his or her paper.

You should decline to review manuscripts in which you have conflicts of interest resulting from competitive, collaborative, or other relationships or connections with any of the authors, companies, or institutions connected to the papers.

If your previous or present connection with the author(s) or an author's institution might be construed as creating a conflict of interest, but no actual conflict exists, please include this issue in your confidential comments to the editor. If in doubt, please contact the Editor who requested the review before accepting.

Respect the confidentiality of the manuscript sent to you. You should not discuss unpublished manuscripts with colleagues or use the information in your own work. If you feel a colleague is more qualified than you to review the paper, do not pass the manuscript on to that person without first requesting permission to do so from the editor. Your review and your recommendation should also be considered confidential.

If you choose to remain anonymous, ensure that you avoid comments to the authors that might serve as clues to your identity.

## **Comments to the Editor**

Your Comments to the Editor will be submitted to the Handling Editor and the Editor-in-Chief only. These should include any possible conflicts of interest. Comments and constructive criticism of the manuscript should be placed in the Comments to the Author.

## **Comments to the Author**

Your Comments to the Author will be submitted to the Handling Editor and the Editor-in-Chief. They are also communicated to the authors and to the other anonymous reviewers of the manuscript once the editor has made a decision.

Comments should be constructive and designed to enhance the manuscript. You should consider yourself the authors' mentor. Make your comments as complete and detailed as possible. Express your views clearly with supporting arguments and references as necessary. Include clear opinions about the strengths, weaknesses and relevance of the manuscript, its originality and its importance to the field. Specific comments that cite line numbers are most helpful. If you feel unqualified to address certain aspects of the manuscript, please include a statement to identify these areas.

Begin by identifying the major contributions of the paper. What are its major strengths and weaknesses, and its suitability for publication? Please include both general and specific comments bearing on these questions, and emphasize your most significant points.

Support your general comments, positive or negative, with specific evidence.

If you wish to make comments directly on the manuscript pdf using the Note tool, you may do so. However, we do not expect you to copy-edit the manuscript. If you do annotate the pdf, please also include a summary of your general comments. You may also upload other documents (e.g. your review as a document, useful references). The journal editorial assistant will remove your identity from the properties of these documents to maintain your anonymity.

Points to consider in your review include:

- Is the topic of the manuscript appropriate for the Journal? Is the information of significant interest to the broad readership of the Journal?
- Do the title, abstract, key words, introduction, and conclusions accurately and consistently reflect the major point(s) of the paper?
- Is the writing concise, easy to follow, and interesting, without repetition?
- Is the aim clearly stated?
- Are the methods appropriate, scientifically sound, current, and described clearly enough that the work could be repeated by someone else?
- Is the research ethical and have the appropriate approvals/consent been obtained?
- Are appropriate statistical analyses used? Are they sufficiently justified and explained? Are statements of significance justified?
- When results are stated in the text of the paper, are they supported by data? Can you verify them easily by examining tables and figures? Are any of the results counterintuitive?
- Are all tables and figures necessary, clearly labelled, well designed, and readily interpretable? Is information in the tables and figures redundant? Is it repeated in the text?

- Are the conclusions supported by the data presented?
- Are the references cited the most appropriate to support the manuscript? Are citations provided for all assertions of fact not supported by the data in this paper? Are any key citations missing?
- Consider the length of the manuscript, relative to the content. Should any portions of the paper should be expanded, condensed, combined, or deleted? (Please be specific in your advice, and don't simply advise overall shortening by x%).
- Does the manuscript comply with the Instructions for Authors?
- Please also comment on any possible research or publication misconduct, such as:
- Does this manuscript report data or conclusions already published or in press? If so, please provide details.
- Has the author plagiarised another publication?
- Is there any indication that the data have been fabricated or inappropriately manipulated?
- Have the authors declared all relevant competing interests?

[Don't be rude to non-native English speakers](#). The dominance of English contributes to inequities in science. Writing in a second language is hard and editing and translation services are expensive. Concentrate on reviewing the science, not the English language. If the language obscures the science to the extent that you cannot review the manuscript, inform the editor. You are welcome to correct grammatical errors and help improve the writing, but this is not the major role of a reviewer. You may suggest that the English language needs revision but do not ask that the authors seek the assistance of 'a native English speaker', because speaking English as a native does not indicate proficiency in scientific English.

Our Instructions for Authors are available [here](#) and include the Author checklist for transparency in empirical studies.

### **Mechanics of Editorial Manager**

Please contact the Journal Editorial Assistant, available through Editorial Manager if you have any questions about the Editorial Manager system.
