

## Instructions for authors

### SCIENCE CHINA Technological Sciences

*SCIENCE CHINA Technological Sciences* is a monthly peer-reviewed academic journal supervised by the Chinese Academy of Sciences, and co-sponsored by the Chinese Academy of Sciences and the National Natural Science Foundation of China. Its primary mission is to encourage communication of basic and innovative research results of high quality in the fields of technological sciences. The subject areas featured include materials science, nanotechnology, mechanical engineering, engineering thermophysics, energy sciences, network science, nonlinear dynamics and control, hydraulic engineering, space science, civil engineering, nuclear science and technology, electronic engineering, power system and automation, environmental science and technology, optical engineering, solid mechanics, and engineering mechanics. All papers should be intelligible for a broad scientific audience. Contributions are invited from researchers all over the world.

*SCIENCE CHINA Technological Sciences* is indexed by SCI, EI, CA, etc.

Papers published in *SCIENCE CHINA Technological Sciences* include:

**Articles:** report on important original results in all areas of technological sciences.

**Reviews:** summarize representative results and achievements in a particular topic or area, comment on the current research progress, and advise on the research directions, which should be based on or closely related to the author's own research work.

**Letters:** present short reports in a timely manner of the latest important results.

**News & Views:** introduce or comment on recent scientific advances or issues that have major influence on science or scientific community.

### How to submit

To submit a manuscript, please visit <https://mc03.manuscriptcentral.com/scts>, log on at ScholarOne Manuscript System, and follow the instructions to upload the text and image/table files. For a new user, please register an "Author Account", and then submit a manuscript following the guidance.

Please introduce the research background, innovation and significance of your work, as well as your latest publications in a cover letter when submitting. The detailed contact information of the first author and corresponding author is required (please promptly inform the editorial

office of any change of contacting addresses). The authors may recommend 3–5 qualified reviewers and/or request the exclusion of specific reviewers. An informative cover letter is considered helpful for editors and reviewers to evaluate your paper.

Duplicate submission is forbidden. In this case, we will inform the author's institution and the relevant journal.

Poor English expression of a submitted manuscript may lead to the final rejection.

File format: single columned, A4 size, 10 pt, 1.5 line spacing, word or pdf file, with figures and tables inserted in the text. Template is not mandatory.

### **Reviewing policy**

All submissions will be reviewed by referees selected by the editorial board. The decision of acceptance or rejection of a manuscript is made by the editorial board based on the referees' reports. The entire review process may take 40 to 60 days, and the editorial office will inform the author of the decision as soon as the process is completed. If the editorial board fails to make a decision within 90 days, it is up to the authors to decide whether they would withdraw their paper and submit it elsewhere.

### **Ethical responsibilities of authors**

This journal is committed to upholding the integrity of the scientific record. As a member of the Committee on Publication Ethics (COPE) the journal will follow the COPE guidelines on how to deal with potential acts of misconduct.

Authors should refrain from misrepresenting research results which could damage the trust in the journal and ultimately the entire scientific endeavor. Maintaining integrity of the research and its presentation can be achieved by following the rules of good scientific practice, which includes:

- The manuscript has not been submitted to more than one journal for simultaneous consideration.
- The manuscript has not been published previously (partly or in full), unless the new work concerns an expansion of previous work (please provide transparency on the re-use of material to avoid the hint of text-recycling ("self-plagiarism")).
- A single study is not split up into several parts to increase the quantity of submissions and submitted to various journals or to one journal over time (e.g. "salami-publishing").
- No data have been fabricated or manipulated (including images) to support your conclusions

- No data, text, or theories by others are presented as if they were the authors own ("plagiarism"). Proper acknowledgements to other works must be given (this includes material that is closely copied (near verbatim), summarized and/or paraphrased), quotation marks are used for verbatim copying of material, and permissions are secured for material that is copyrighted.

Important note: the journal may use software to screen for plagiarism.

- Consent to submit has been received from all co-authors and responsible authorities at the institute/organization where the work has been carried out before the work is submitted.
- Authors whose names appear on the submission have contributed sufficiently to the scientific work and therefore share collective responsibility and accountability for the results.

In addition:

- Changes of authorship or in the order of authors are not accepted after acceptance of a manuscript.
- Requests to add or delete authors at revision stage or after publication is a serious matter, and may be considered only after receipt of written approval from all authors and detailed explanation about the role/deletion of the new/deleted author. The decision on accepting the change rests with the Editor-in-Chief of the journal.
- Upon request authors should be prepared to send relevant documentation or data in order to verify the validity of the results. This could be in the form of raw data, samples, records, etc.

If there is a suspicion of misconduct, the journal will carry out an investigation following the COPE guidelines. If, after investigation, the allegation seems to raise valid concerns, the accused author will be contacted and given an opportunity to address the issue. If misconduct has been proven, this may result in the Editor-in-Chief's implementation of the following measures, including, but not limited to:

- If the article is still under consideration, it may be rejected and returned to the author.
- If the article has already been published online, depending on the nature and severity of the infraction, either an erratum will be placed with the article or in severe cases complete retraction of the article will occur. The reason must be given in the published erratum or retraction note.
- The author's institution may be informed.

### **Authorship**

Authorship should be limited to those who have contributed substantially to the work, and every author has responsibility for the data and argument mentioned in the paper. The corresponding author must have obtained permission from all authors for the submission of each version of the paper and for any change in authorship.

## **Disclosure of potential conflict of interests**

Authors must disclose all relationships or interests that could influence or bias the work. Although an author may not feel there are conflicts, disclosure of relationships and interests affords a more transparent process, leading to an accurate and objective assessment of the work. Awareness of real or perceived conflicts of interests is a perspective to which the readers are entitled and is not meant to imply that a financial relationship with an organization that sponsored the research or compensation for consultancy work is inappropriate. Examples of potential conflicts of interests that are directly or indirectly related to the research may include but are not limited to the following:

- Research grants from funding agencies (please give the research funder and the grant number)
- Honoraria for speaking at symposia
- Financial support for attending symposia
- Financial support for educational programs
- Employment or consultation
- Support from a project sponsor
- Position on advisory board or board of directors or other type of management relationships
- Multiple affiliations
- Financial relationships, for example equity ownership or investment interest
- Intellectual property rights (e.g. patents, copyrights and royalties from such rights)
- Holdings of spouse and/or children that may have financial interest in the work

In addition, interests that go beyond financial interests and compensation (non-financial interests) that may be important to readers should be disclosed. These may include but are not limited to personal relationships or competing interests directly or indirectly tied to this research, or professional interests or personal beliefs that may influence your research.

The corresponding author collects the conflict of interest disclosure forms from all authors. In author collaborations where formal agreements for representation allow it, it is sufficient for the corresponding author to sign the disclosure form on behalf of all authors. Examples of forms can be found here (link to various forms TO BE INCLUDED).

The corresponding author will include a summary statement in the text of the manuscript in a separate section before the reference list that reflects what is recorded in the potential conflict of interest disclosure form(s).

See below examples of disclosures:

**Funding:** This study was funded by X (grant number X).

**Conflict of Interest:** Author A has received research grants from Company A. Author B has received a speaker honorarium from Company X and owns stock in Company Y. Author C is a member of committee Z.

If no conflict exists, the authors should state:

Conflict of Interest: The authors declare that they have no conflict of interest.

#### **Statement of Human and Animal Rights**

When reporting studies that involve human participants, authors should include a statement that the studies have been approved by the appropriate institutional and/or national research ethics committee and have been performed in accordance with the ethical standards as laid down in the 1964 Declaration of Helsinki and its later amendments or comparable ethical standards.

If doubt exists whether the research was conducted in accordance with the 1964 Helsinki Declaration or comparable standards, the authors must explain the reasons for their approach, and demonstrate that the independent ethics committee or institutional review board explicitly approved the doubtful aspects of the study.

The following statements should be included in the text before the References section:

**Ethical approval:** “All procedures performed in studies involving human participants were in accordance with the ethical standards of the institutional and/or national research committee and with the 1964 Helsinki declaration and its later amendments or comparable ethical standards.”

The welfare of animals used for research must be respected. When reporting experiments on animals, authors should indicate whether the institutional and/or national guidelines for the care and use of animals were followed.

For studies with animals, the following statement should be included:

“All applicable institutional and/or national guidelines for the care and use of animals were followed.”

If articles do not contain studies with human participants or animals by any of the authors, Springer recommends including the following sentence:

“This article does not contain any studies with human participants or animals performed by any of the authors.”

For retrospective studies, please add the following sentence:

“For this type of study formal consent is not required.”

## **Informed consent**

All individuals have individual rights that are not to be infringed. Individual participants in studies e.g. have the right to decide what happens to the (identifiable) personal data gathered and to what they have said e.g. during a study or an interview as well as to any photograph that was taken. Hence it is important that all participants gave their informed consent in writing prior to inclusion in the study. Identifying details (names, dates of birth, identity numbers and other information) of the participants that were studied should not be published in written descriptions, photographs, and genetic profiles unless the information is essential for scientific purposes and the participant (or parent or guardian if the participant is incapable) has given written informed consent for publication. Complete anonymity is difficult to achieve in some cases, and informed consent should be obtained if there is any doubt. For example, masking the eye region in photographs of participants is inadequate protection of anonymity. If identifying characteristics are altered to protect anonymity, such as in genetic profiles, authors should provide assurance that alterations do not distort scientific meaning.

The following statement should be included:

**Informed consent:** “Informed consent was obtained from all individual participants included in the study.”

If identifying information about participants is available in the article, the following statement should be included:

“Additional informed consent was obtained from all individual participants for whom identifying information is included in this article.”

## **Copyright**

A completed form assigning copyright to Science China Press must be returned to the *Sci China Tech Sci* office when the paper is accepted for publication. The copyright covers the exclusive right to reproduce and distribute the article (in various languages), including offprints and reprints, translations, photographic reproductions, microform, electronic form (offline, online) or other reproductions of similar nature. The Copyright Transfer Statement is available at [www.SciChina.com](http://www.SciChina.com).

## **After acceptance**

For the paper with a great breakthrough result, quick publication will be arranged. After

typesetting, page proof is usually sent electronically as email attachments to the corresponding author. The proof plus any minor corrections must be returned to the managing editor within 36 hours. Failure to do this will result in delays in publication. Corrections can be noticed in different ways: 1) highlight the corrections and send us the print proof pages; 2) fax us the corrections; 3) highlight the corrections and send us the corrected page proof as email attachment.

### **After publication**

The full text opens freely to the readers in China at [www.SciChina.com](http://www.SciChina.com), and is available to overseas readers at <http://link.springer.com/journal/11431>.

### **Publication charge**

The black and white page is 500 RMB/page (100 US\$/page). The charge for color page is listed as below. An invoice will be sent to the corresponding author by the Editorial Office. If offprints and sample journals are required, please contact the managing editor and pay extra fee.

Amount of color page (pages)	Fees (RMB Yuan/page)	Fees (US\$/page)
1-3	1000	200
4 and above	800	160

### **Open Choice**

Open Choice allows you to publish open access in this journal, making your research more visible and accessible immediately on publication.

Article processing charges (APCs) vary by journal – [view the full list](#)

### **Copyright and license term-CC BY**

Open Choice articles do not require transfer of copyright as the copyright remains with the author. In opting for open access, the author(s) agree to publish the article under the Creative Commons Attribution License.

## Research Data Policy:

The journal encourages authors, where possible and applicable, to deposit data that support the findings of their research in a public repository. Authors and editors who do not have a preferred repository should consult Springer Nature's list of repositories and research data policy.

- [List of Repositories](#)
- [Research Data Policy](#)

General repositories - for all types of research data - such as Figshare and Dryad may also be used. Datasets that are assigned digital object identifiers (DOIs) by a data repository may be cited in the reference list. Data citations should include the minimum information recommended by DataCite: authors, title, publisher (repository name), identifier.

- [DataCite](#)

Springer Nature provides a research data policy support service for authors and editors, which can be contacted at **[researchdata@springernature.com](mailto:researchdata@springernature.com)**.

This service provides advice on research data policy compliance and on finding research data repositories. It is independent of journal, book and conference proceedings editorial offices and does not advise on specific manuscripts.

## Contact

Editorial Office of Science China Technological Sciences

Science China Press

16 Donghuangchenggen North Street

Beijing 100717, China

Tel: 8610-64010631

Fax: 8610-64016350

Email: [technology@scichina.org](mailto:technology@scichina.org)

## **Manuscript format**

Contributions are required of a concise, focused account of the findings and reliable essential data. They should be well organized and written clearly and simply, avoiding exhaustive tables and figures. Authors are advised to use internationally agreed nomenclature, express all measurements in SI units, and quote all the relevant references.

*Title:* Titles must be limited to no more than 20 words, and should be concise, indexable, and informative for a broad scientific audience. Authors should avoid using colons, questions, nonstandard abbreviations, etc., in titles.

*Author(s):* Authorship should be limited to those who have contributed substantially to the work.

The order of the authors listed should be agreed by all the coauthors, and every author should have the responsibility for the published content.

Family names are written in upper case. The email address of the corresponding author is required.

*Author affiliation:* The affiliation should be the institution where the work was done. Complete addresses are required with post codes.

*Abstract:* An abstract is a summary of the content of the manuscript. It should briefly describe the research purpose, method, result and conclusion. The extremely professional terms, special signals, figures, tables, chemical structural formula, and equations should be avoided here, and citation of references is not allowed.

*Keywords:* A list of three to eight keywords should follow the abstract. The chosen keywords are required to reflect the theme of a manuscript.

*Financial support:* Financial support appears on the bottom of the title page, with grant number(s) following. The full title of each fund is required. For example: National Natural Science Foundation of China; National High-Tech Research & Development Program of China; National Basic Research Program of China.

*Text:* A paper should begin with a brief introduction of the significance of the author's research. Nomenclature, signal, and abbreviation should be defined at their initial appearance. All the figures and tables should be numbered in numerical order.

*Introduction:* Being the most important part of an article, the introduction introduces the

relevant research background and the progress in 2 or 3 years, with references cited in numerical order, then presents the problem to be solved in this article, and finally briefly describes the method adopted in this work. Before the end, the aim of the research should be mentioned. Subtitle is forbidden in this part, and introduction of the article structure is considered unnecessary.

*Materials and method:* This part introduces the materials, method and experimental procedure of the author's work, so as to allow others to repeat the work published based on this clear description.

*Discussion and conclusions:* Conclusions should be derived from the observation and experimental results, and comparison with other relevant results is considered helpful to further proving the results. Repeated data should be avoided, and conclusions and suggestions are required to be clearly expressed. New hypotheses and recommendations may be proposed when warranted.

*Figures and tables:* Figures and tables should be numerically numbered, inserted in the text, and cited in order within the text. The figures should have resolution not lower than 600 dpi and clear lines of 5 px, with signals and letters in Times New Roman at 8 pt. A space should always be maintained between the variable and the unit.

*Equations:* An equation is numerically numbered (Arabic numeral), and has the number put on its right side.

*Acknowledgements:* The author expresses his/her thanks to the people helping with this work, and acknowledges the valuable suggestions from the peer reviewers.

*References:* Reference citation is regarded as an important indicator of the paper quality. If the relevant references, especially the results published in 2 to 3 years are not cited in the paper, or most citations are from the author's publications, the editor will consider this paper unattractive. References should be numerically numbered and cited in order within the text, with the numbers expressed in square brackets. The author should carefully check the author names, article title, journal title, year, volume and issue number of references, and create the listing according to the format of *Science China Technological Sciences*.

#### **Reference format**

1. For an author's name, full spelling of family name appears before abbreviation of given

name, with a spacing in the middle.

2. If there are more than 3 authors, the first 3 names are followed by et al.
3. The article title should be identified by an initial capital letter with the remainder of the title in lower case.
4. For correct abbreviations of journal titles, refer to ISO, e.g., *Chin Sci Bull* for *Chinese Science Bulletin*, *Sci China Life Sci* for *Science China Life Sciences*.
5. For books and proceedings, the initial letter is capitalized for all the notional words and for function words with more than 4 letters.
6. Do not forget to list the editor names of the proceedings, the publisher, the publishing address, and the beginning and terminating pages.
7. Accepted but unpublished papers should be followed by "in press".
8. Websites or homepages cannot be cited as references.
