

## Information for authors

*SCIENCE CHINA Earth Sciences* is a monthly multidisciplinary academic journal supervised by the Chinese Academy of Sciences and co-sponsored by the Chinese Academy of Sciences and National Natural Science Foundation of China. Its primary mission is to encourage communication of basic and innovative research results of high quality in the fields of earth sciences, especially focusing on breakthroughs by the Chinese scientists. The subject areas featured include geology, geochemistry, geophysics, space science, geography, environmental science, atmospheric science and oceanography. All papers should be intelligible for a broad scientific audience.

Contributions are also invited from researchers all over the world. The Chinese version of an accepted paper will be required if its first author or corresponding author is Chinese.

*Science China Earth Sciences* is currently covered by the following (A&I) services: Science Citation Index, Science Citation Index Expanded (SciSearch), Journal Citation Reports/Science Edition, EI Compendex, SCOPUS, Chemical Abstracts Service (CAS), Google Scholar, ASFA, CAB Abstracts, Current Contents/Physical, Chemical and Earth Sciences, Earthquake Engineering Abstracts, EBSCO Academic Search, EBSCO Biomedical Reference Collection, EBSCO Discovery Service, EBSCO Energy & Power Source, EBSCO Engineering Source, EBSCO STM Source, EBSCO TOC Premier, Gale, Gale Academic OneFile, Gale InfoTrac, Geobase, GeoRef, Global Health, INIS Atomindex, OCLC WorldCat Discovery Service, ProQuest Agricultural & Environmental Science Database, ProQuest Central, ProQuest Earth, Atmospheric & Aquatic Science Database, ProQuest Natural Science Collection, ProQuest Science Database, ProQuest SciTech Premium Collection, ProQuest-ExLibris Primo, ProQuest-ExLibris Summon, Water Resources Abstracts, Zoological Record.

Papers published in *SCIENCE CHINA Earth Sciences* include:

**Review** summarizes representative results and achievements in a particular topic or an area, comments on the current situation, and advises on the research directions. The scope of a Review should be broad enough that it is not dominated by the author's own research work. Review is usually up to 20,000 words in length. Review may contain online-only supplementary material.

**Progress** introduces and comments on the substantial advance and its importance in the fast-developing areas. As a guideline, Progress is expected to be less than 8,000 words with up to 80 references.

**Research Paper** reports on important original results in all areas of earth sciences. A Research Paper may be accompanied by an online-only supplementary material, which is also peer-reviewed. A Research Paper is typically no longer than 20,000 words.

**News Focus** informs readers the novel and innovative findings in earth sciences. In general, News Focus should have no more than two authors. News Focus is expected to be less than 4 pages with 4 displayed items and less than 10 references. Any combination of figures and tables are permitted, as long as you keep to a total of 4 items or fewer. Abstract and keywords are not needed.

**Highlight** explains potential scientific significance of a most recent exciting research. Highlight is usually no more than two

authors and limited to 4 pages with less than 10 references; it is limited to 2 display items (figures and tables). Abstract and keywords are not needed.

**Discussion** comments on the contributions published in *SCIENCE CHINA Earth Sciences* within the previous one year. The authors of the original paper are given an opportunity to reply. Comment and reply are peer reviewed and never more than 6 printed pages.

**Forum** is a platform for discussions on timely or controversial issues in earth sciences. It is intended to discuss ideas from a personal viewpoint. Forum is expected to be no more than 4 pages and less than 30 references.

## How to submit

To submit a manuscript, please visit the website at <https://mc03.manuscriptcentral.com/sces>. For a new user, please register an "Author Account", and then submit a manuscript following the guidance.

Please introduce the research background, innovation and scientific value of your work, as well as your latest publications in a cover letter when submitting. The name, affiliation, phone number and e-mail address of the corresponding author are required. The authors may recommend 3–8 qualified reviewers and/or request the exclusion of specific reviewers. An informative cover letter is considered helpful for editors and reviewers to make evaluation of your paper.

Poor English expression of a submitted manuscript may lead to the final rejection.

File format: single columned, A4 size paper, 11-point Times New Roman font, 1.5-spaced text throughout, with figures and tables inserted in the text.

## Reviewing policy

The decision of acceptance or rejection of a manuscript is made by the editorial board based on the referees' reports. The entire review process may take 60 to 90 days, and the editorial office will inform the author of the decision as soon as the process is completed. If the editorial board fails to make a decision within 90 days, the authors should contact with the managing editor.

## Ethical responsibilities of authors

This journal is committed to upholding the integrity of the scientific record. As a member of the Committee on Publication Ethics (COPE) the journal will follow the COPE guidelines on how to deal with potential acts of misconduct.

Authors should refrain from misrepresenting research results which could damage the trust in the journal and ultimately the entire scientific endeavour. Maintaining integrity of the research and its presentation can be achieved by following the rules of good scientific practice, which includes:

- The manuscript has not been submitted to more than one journal for simultaneous consideration.
- The manuscript has not been published previously (partly or in full), unless the new work concerns an expansion of previous work (please provide transparency on the re-use of material to avoid the hint of text-recycling ("self-plagiarism")).
- A single study is not split up into several parts to increase the quantity of submissions and submitted to various journals or to one journal over time (e.g. "salami-publishing").

- No data have been fabricated or manipulated (including images) to support your conclusions.

- No data, text, or theories by others are presented as if they were the authors own (“plagiarism”). Proper acknowledgements to other works must be given (this includes material that is closely copied (near verbatim), summarized and/or paraphrased), quotation marks are used for verbatim copying of material, and permissions are secured for material that is copyrighted.

Important note: the journal may use software to screen for plagiarism.

- Consent to submit has been received from all co-authors before the work is submitted and the corresponding author is responsible for having ensured that this agreement has been reached.

### In addition

If there is a suspicion of misconduct, the journal will carry out an investigation following the COPE guidelines. If, after investigation, the allegation seems to raise valid concerns, the accused author will be contacted and given an opportunity to address the issue. If misconduct has been established beyond reasonable doubt, this may result in the Editor-in-Chief’s implementation of the following measures, including, but not limited to:

If the article is still under consideration, it may be rejected and returned to the author.

If the article has already been published online, depending on the nature and severity of the infraction, either an erratum will be placed with the article or in severe cases complete retraction of the article will occur. The reason must be given in the published erratum or retraction note.

The author’s institution may be informed.

### Authorship

Authorship should be limited to those who have contributed substantially to the work, and every author has responsibility for the data and argument mentioned in the paper. The corresponding author must have obtained permission from all authors for the submission of each version of the paper and for any change in authorship. In addition: changes of authorship or in the order of authors are not accepted after acceptance of a manuscript; requests to add or delete authors at revision stage or after publication is a serious matter, and may be considered only after receipt of written approval from all authors and detailed explanation about the role/deletion of the new/deleted author. The decision on accepting the change rests with the Editor-in-Chief of the journal; upon request authors should be prepared to send relevant documentation or data in order to verify the validity of the results. This could be in the form of raw data, samples, records, etc.

### Copyright

A completed form assigning copyright to Science China Press must be returned to the *SCIENCE CHINA Earth Sciences* Office when the paper is accepted for publication. The copyright covers the exclusive right to reproduce and distribute the article (in various languages), including reprints, translations, photographic reproductions, microform, electronic form (offline, online) or other reproductions of similar nature. The Copyright Transfer Statement is available at [www.scichina.com](http://www.scichina.com).

### Research Data Policy

The journal encourages authors, where possible and applicable, to deposit data that support the findings of their research in a public repository. Authors and editors who do not have a preferred repository should consult Springer Nature’s list of repositories and research data policy.

#### List of Repositories

(<http://www.springernature.com/gp/group/data-policy/repositories>)

#### Research Data Policy

(<http://www.springernature.com/gp/group/data-policy/faq>)

General repositories—for all types of research data—such as Figshare and Dryad may also be used. Datasets that are assigned digital object identifiers (DOIs) by a data repository may be cited in the reference list. Data citations should include the minimum information recommended by DataCite: authors, title, publisher (repository name), identifier.

**DataCite** (<https://www.datacite.org/>)

Springer Nature provides a research data policy support service for authors and editors, which can be contacted at [researchdata@springernature.com](mailto:researchdata@springernature.com).

This service provides advice on research data policy compliance and on finding research data repositories. It is independent of journal, book and conference proceedings editorial offices and does not advise on specific manuscripts.

#### Helpdesk

(<http://www.springernature.com/gp/group/data-policy/helpdesk>)

### Disclosure of potential conflict of interests

Authors must disclose all relationships or interests that could influence or bias the work. Although an author may not feel there are conflicts, disclosure of relationships and interests affords a more transparent process, leading to an accurate and objective assessment of the work. Awareness of real or perceived conflicts of interests is a perspective to which the readers are entitled and is not meant to imply that a financial relationship with an organization that sponsored the research or compensation for consultancy work is inappropriate. Examples of potential conflicts of interests that are directly or indirectly related to the research may include but are not limited to the following:

- Research grants from funding agencies (please give the research funder and the grant number)
- Honoraria for speaking at symposia
- Financial support for attending symposia
- Financial support for educational programs
- Employment or consultation
- Support from a project sponsor
- Position on advisory board or board of directors or other type of management relationships
- Multiple affiliations
- Financial relationships, for example equity ownership or investment interest
- Intellectual property rights (e.g. patents, copyrights and royalties from such rights)
- Holdings of spouse and/or children that may have financial interest in the work

In addition, interests that go beyond financial interests and

compensation (non-financial interests) that may be important to readers should be disclosed. These may include but are not limited to personal relationships or competing interests directly or indirectly tied to this research, or professional interests or personal beliefs that may influence your research.

The corresponding author will include a summary statement in the text of the manuscript in a separate section before the reference list.

See below examples of disclosures:

**Funding:** This work was supported by X (Grant No. X).

**Conflict of Interest:** Author A has received research grants from Company A. Author B has received a speaker honorarium from Company X and owns stock in Company Y. Author C is a member of committee Z.

If no conflict exists, the authors should state:

**Conflict of Interest:** The authors declare that they have no conflict of interest.

## After acceptance

For the paper with a great breakthrough result, quick publication will be arranged. After typesetting, page proof is usually sent electronically to the corresponding author. The proof plus any minor corrections must be returned to the managing editor within 72 hours. Failure to do this will result in delays in publication. Each accepted paper will be charged by publication fee.

## After publication

If offprints and sample journals are required, please contact the managing editor and pay the extra fee. The full text in English opens free to the readers in China at [earth.scichina.com](http://earth.scichina.com), and the full text in English is available to overseas readers at [link.springer.com/journal/11430](http://link.springer.com/journal/11430).

## Contact

Editorial Office of *SCIENCE CHINA Earth Sciences*  
16 Donghuangchenggen North Street  
Beijing 100717, China  
Tel: +86 10 64015883  
Fax: +86 10 64016350  
Email: [geo@scichina.org](mailto:geo@scichina.org)

## Manuscript format

Contributions are required of a concise, focused account of the findings and reliable essential data. They should be well organized and written clearly and simply, avoiding exhaustive tables and figures. Authors are advised to use internationally agreed nomenclature, express all measurements in SI units, and quote all the relevant references.

**Title:** Titles must be limited to no more than 20 words, and should be concise, indexable, and informative for a broad scientific audience. Authors should avoid using colons, questions, non-standard abbreviations, etc. in titles.

**Author(s):** Family names are written in upper case. The email address of the corresponding author is required.

**Author affiliation:** The affiliation should be the institution where the work was done. Complete addresses are required with post codes.

**Abstract:** An abstract is a summary of the content of the manuscript. It should briefly describe the research purpose, method,

result and conclusion. The extremely professional terms, special signals, figures, tables, chemical structural formula, and equations should be avoided here, and citation of references is not allowed.

**Keywords:** A list of three to eight keywords should follow the abstract. The chosen keywords are required to reflect the theme of a manuscript.

**Text:** A paper should begin with a brief introduction of the significance of the author's research. Nomenclature, signal and abbreviation should be defined at their initial appearance. All the figures and tables should be numbered in numerical order.

**Introduction:** Being the most important part of an article, the introduction introduces the relevant research background and the progress in 2 or 3 years, then presents the problem to be solved in this article, and finally briefly describes the method adopted in this work. Before the end, the aim of the research should be mentioned. Subtitle is forbidden in this part, and introduction of the article structure is considered unnecessary.

**Materials and method:** This part introduces the materials, method and experimental procedure of the author's work, so as to allow others to repeat the work published based on this clear description.

**Discussion and conclusions:** Conclusions should be derived from the observation and experimental results, and comparison with other relevant results is considered helpful to further proving the results. Repeated data should be avoided, and conclusions and suggestions are required to be clearly expressed. New hypotheses and recommendations may be proposed when warranted.

**Figures and tables:** Figures and tables should be numerically numbered, inserted in the text, and cited in order within the text. The figures should have resolution not lower than 600 dpi and clear lines of 5 px, with signals and letters in Arial at 7 pt. A space should always be maintained between the variable and the unit.

**Equations:** An equation is numerically numbered (Arabic numeral), and has the number put on its right side.

**Acknowledgements:** The author expresses his/her thanks to the people helping with this work, and acknowledges the valuable suggestions from the peer reviewers. Financial support appears here, with grant number(s) following. The full title of each fund is required.

**References:** Reference citation is regarded as an important indicator of the paper quality. If the relevant references, especially the results published in 2 to 3 years are not cited in the paper, or most citations are from the author's publications, the editor will consider this paper unattractive. The author-year system is used in the text. References should be cited in text using author name(s) and the date of publication.

## Reference format

1. For an author's name, full spelling of family name appears before abbreviation of given name, with a spacing in the middle.
2. The article title should be identified by an initial capital letter with the remainder of the title in lowercase.
3. For correct abbreviations of journal titles, refer to ISO, e.g., *Sci China Earth Sci* for *SCIENCE CHINA Earth Sciences*.
4. For books and proceedings, the initial letter is capitalized for all the notional words and for function words with more than 4 letters.
5. The publications in languages with non-Latin alphabets should be translated into English, and a notation such as "(in Chinese)" must be added behind the title of the article or book.

6. Do not forget to list the editor names of the proceedings, the publisher, the publishing address, and the beginning and terminating pages.

7. Unpublished materials or the papers to appear but without volume number cannot be cited as references, except for the one with DOI.
