

## **Manuscript Organization**

### **1-Title page**

It includes:

-Title of the Article. Title should be brief, descriptive and concise

-Information about ALL authors, including:

**Full name,**

**Academic position or professional affiliations** (i.e. Associate Professor, Post doctorate, PhD student, MSc Student, Senior Engineer, etc.)

**Last Degree earned** (i.e. MSc, PhD, Dr. Eng., etc)

**Name and complete address** of affiliation institute, including Telephone Number and Fax number

**E-mail** address of the author from the **affiliated institute**

**Designated corresponding author.** Information regarding corresponding author is given below.

-Name of supporting funds Organization

This page should not be numbered.

**Abstract and Keywords:** Page 1 of the main text should include only paper title, abstract and keywords (without name of authors). Abstract is a concise summary of the whole paper and should briefly state the objective, approach, summary of results and conclusions drawn, all in a single paragraph. Abstract should not be a summary of subjects covered or introduction. Avoid expressions such as “is discussed” and “is described” in the Abstract. Do not include references, figures, or tables. Abstract is widely indexed and therefore is the most read portion of a manuscript. The abstract should be between 200-250 words. At the end of Abstract, the list of 4-6 Keywords must be given.

**References:** All publication cited in the text should be presented in the list of reference and vice versa. In the text, references should be given by numbers in order as they appear in the text by [ ]. All the references should be given in the list of references in the order of their numbers as they appeared in the text.

References to books, journal articles, articles in collections and conference or workshop proceedings, and technical reports should be listed at the end of the article in numbered order. Articles in preparation or articles submitted for publication, unpublished observations, personal communications, etc. should not be included in the reference list but should only be mentioned in the article text (e.g., T. Moore, personal communication).

References to books should include the author's name, title, publisher, place of publication, year of publication, page numbers where appropriate, in the order, given in the example below:

[1] Bird R.B., Stewart W.E. and Lightfoot E.N. Transport Phenomena, Wiley, New York, 1960.

References to articles in periodicals should include: the author's name, article title, title of periodical, volume number (issue number where appropriate), year of publication, first and last page numbers, in the order given in the example below:

[2] Baziar M.H., Salemi Sh., Heidari T., "Analysis of Earthquake Response of an Asphalt Concrete Core Embankment Dam", International Journal of Civil Engineering, 2006; 4 (3), 192-210.

**Corresponding Author:** The profile (previous research work and papers) of the corresponding author, in any research work, is very important for the readers and reviewers. For this reason, it is recommended that the most renowned author (among co-authors) to be selected as the corresponding author. It is strongly recommended to avoid having graduate student (MSc or PhD) as the corresponding author and instead have a university professor as corresponding author. Based on the policy of this Journal, corresponding author has to present his/her email from his/her affiliated institute for further contact. All the information provided by the corresponding author has to be the same as what appears in the affiliated Institute website.
