

Guidelines for Authors of *Kinematics and Physics of Celestial Bodies*

1. A manuscript should be submitted in electronic form. The phone number and address of the corresponding author should be specified.

2. The length of the manuscript should not exceed 20 pages printed with 1.5 line spacing and 14-pt font; no more than one figure per three pages of text is allowed.

3. The manuscript should be arranged in the following order: list of authors, their affiliations and full addresses, manuscript title, abstract, and main text.

4. Variables and physical quantities are italicized; vectors and matrices are typeset in boldface. Mathematical functions (sin, exp, max, log, etc.) are typeset as plain text. Formulas that are not referred to in the text are not numbered.

5. Figures should be black-and-white line drawings. Grayscale images are allowed only if there is adequate contrast. Figures should not contain excessive lines, labels, frames, etc. All explanations of notation are made in the caption or text. The coordinate axes should be labeled with variables and their units of measure (for example, λ , nm). Figures should have sequential numbers and captions.

6. The list of references is numbered in alphabetical order and then in chronological order if the authors are the same. The name(s) of the editor(s) of a book (in the absence of authors' names on the title page) is placed after the title; in the list of references, such publications are arranged alphabetically by title. For journal articles, it is necessary to indicate all authors, full title of article, title of publication, year, volume, number, and initial and final pages. For monographs, full title, place

of publication, publisher, publication date, and total number of pages should be specified. In the text, a reference is given using its sequential number in brackets (for example, [2]). References to unpublished works are not allowed.

7. In selecting physical units of measure, it is recommended to adhere to the International System of Units (SI).

8. Manuscripts prepared without taking into account the above rules will not be considered.

9. Manuscript returned to the author for correction and not resubmitted within two months are considered rejected.

10. The editorial board will send edited proofs to the author, which must be returned within two days.
