Guidelines for Authors of *Russian Mathematics*

1. GENERAL

Russian Mathematics publishes articles on mathematics and mechanics, containing new mathematical results, review articles highlighting the state of the art of mathematics, which are of interest to a wide range of specialists in mathematics and mechanics.

The journal also publishes brief communications containing main results without proof; their length should not exceed six pages. Complete mathematical proofs are sent to the editorial board together with the brief communication text. Brief communications are accepted by the submission of the members of the editorial board of the journal. In this regard, the authors of brief communications should contact one of the editorial board members personally.

Manuscripts are accepted in Russian or English from citizens of any country.

The authors should obtain permission for any data (fragments of text, tables, figures, diagrams, graphics, photographs, etc.) borrowed from other works from the copyright holders.

To ensure objectivity and transparency in research and observance of the accepted principles of ethical and professional conduct, authors should include information regarding funding sources and potential conflicts of interest (financial or nonfinancial).

By submitting the manuscript to the journal, the author guarantees that the corresponding text (original or translated into other languages or from other languages) has never been published and is not considered for publication elsewhere. The journal supports the COPE publication ethics standards (https://www.pleiades.online/en/authors/publication-ethics/); the authors should include in the manuscript the necessary information related to their observance concerning plagiarism, self-plagiarism, and borrowing without permission (https://www.pleiades.online/en/authors/guidlines/reference-information/).

Manuscripts should be submitted through the Publishing Portal https://publish.sciencejournals.ru/. Register in the portal as an author and follow the instructions of the system.

A cover letter from the authors and copyright transfer agreements completed and signed by all the authors should be submitted simultaneously with the manuscript. The copyright transfer agreement does enter into force in the case and since the manuscript is accepted for publication. The forms of agreements with publishers and additional legal information can be found at https://www.pleiades.online/en/authors/agreement/ for *Russian Mathematics*.

The editorial board asks authors to name three to five possible reviewers in the cover letter.

If it is assumed that the article will be published out in open access mode, then instead of filling out the author's agreement, the authors should follow the instructions at https://www.pleiades.online/en/authors/openaccess/how-to-publish/.

Upon receiving the manuscript, the editorial board notes authors within two business weeks. All manuscripts submitted for publication undergo peer review. The manuscript returned to authors for revision should be resubmitted within two months. After this period, the manuscript is considered a new submission. A letter from the authors, describing the corrections made and responding to all reviewer comments, should be attached to the revised manuscript.

If no response was received after submitting the manuscript, please contact the editorial board by e-mail. If there is still no answer, report to publish@sciencejournals.ru, including the ID of the manuscript. The editors keep the right not to enter into correspondence with the author regarding the reasons for refusing to publish the manuscript.

2. MANUSCRIPT STRUCTURE

The following components of the manuscript are necessary:

1. Title, specific and informative;
2. List of all authors (initials and surnames); The author responsible for the correspondence should be indicated;
3. Affiliations of the authors: complete (without abbreviations) name of institution, its postal address, city, country, and zip code. If there is more than one affiliation, make clear the matching between each surname and the corresponding address;
4. E-mail addresses of all authors;
5. Abstract. The abstract should not be too short and should not contain references to other publications. The abstract should be informative and detailed; it should describe the methods and main results of the study. It should be clear from the abstract what issues were addressed in the research and what answers were obtained;
6. Keywords: 3–6 words or short phrases that accurately reflect the content of the manuscript;
7. The main text of the manuscript. The uniformity of terms should be observed throughout the manuscript. Avoid using different names for the same thing. When preparing the manuscript, the authors should maintain the uniformity of terms, designations, and units of measurement. Abbreviations should be avoided whenever possible, except for commonly used ones. If used, they should be explained upon the first mention;
8. References. The list of references should sufficiently reflect the current state in the field under study and should not be redundant. It must include accessible sources; the cited articles should be accompanied by their doi information;

9. All citations are given only in their original language;

10. Figures should be given a caption, and each table should be given its title. If there are several pieces in one illustration, they should be arranged sequentially and have a common caption;

11. Original files of illustrations must be submitted in the format of the program in which they were prepared. They will be used when preparing the manuscript for publication. Illustrations imported into the manuscript are used as originals for proofreading;

12. Funding sources (if any);

13. Acknowledgments should be mentioned separately from funding sources.

In the absence of at least one of the above elements, the manuscript may be rejected without consideration on the merits.

3. MANUSCRIPT FORMAT
