

## The BV checklist

Before you submit your paper, please take the following into account, as otherwise it might lead to delays in handling:

- I have followed the instructions to authors on:

<https://www.springer.com/earth+sciences+and+geography/geology/journal/445>

### ORGANIZATION AND CONTENTS OF THE PAPER

- The Title and keywords are understandable on their own and can stand alone following the advice given on:

<https://www.springer.com/gp/authors-editors/authorandreviewertutorials/writing-a-journal-manuscript/title-abstract-and-keywords/10285522>

- The abstract fulfills its role and can stand alone following the expectation of an abstract as defined by:

<https://pubs.geoscienceworld.org/geophysics/article-abstract/17/3/645/67062/a-scrutiny-of-the-abstract?redirectedFrom=fulltext>

<http://sepwww.stanford.edu/sep/prof/abscrut.html>

- The introduction to my paper contains appropriate scientific context (with proper referencing), the aims of the study, and a statement of scientific objective.

- The geological setting, if present is given in a separate section, following the introduction, and does not form a major part of the introduction.

- The methods are also presented in a separate section, and enough detail is given so that the study can be independently replicated. If this generates a very long methodology section, some of it can be moved to online supplement(s).

- Results and discussion are separated as much as possible, typically in separate sections of the manuscript.

- The conclusions section summarizes the main findings, based on the discussion section (the reader should not be learning new things in the conclusions section); and there is a link back to the general context/contribution as stated in the introduction.

- The sections are numbered in the above order.

## FORMATING

- I understand that short sentences are typically clearer. So I have avoided long, potentially confusing, sentences; and lists are properly formatted.
- Continuous line numbers have been included in the left margin of the manuscript.
- I have used software to check spelling and grammar.
- If English is not my first language, I have asked a qualified person to read my manuscript and fix any remaining language issues. I understand that badly written manuscripts can be rejected even if the science is sound.

## REFERENCES

- In the main text, if several references are cited consecutively, then they are listed in chronological order, *not* alphabetical order
- I have only used 'e.g.,' for cases where abundant supporting literature is present, and have followed it by at least three references (e.g., Tizio 1991, Caio 1992, Sempronio et al., 1993). [This is to avoid the use of '...and references therein...'.]

## FIGURES

- Fonts are sufficiently large
- All Figures have adequate scales, legends and labeling (in which all symbols are defined).
- Figure panels have lower case callouts (for example Figure 1a, Figure 1b), both for the figure caption and for the label on the figure itself.
